

METAL SCRAP
DISTRIBUTION SYSTEMS

WEIGHING SYSTEM

This system offers the possibility of weighing the unloaded material and facilitates monitoring the material output. All data are stored at the onboard memory and are displayed depending on the requirements of each customer.

FOCUSED TO

High production facilities that need to manage large amount of scrap in the most optimum way to avoid high logistic costs.

CONSISTING OF

- Weighing cells that forward all data to the onboard storage system, providing reliable information related to the unloaded scrap.

PROVIDING

- Monitoring and management of the unloaded scrap amount.
